English (upper-intermediate)
Ukrainian (native)
Russian (native)

Summary

Developer of large-scale applications who has worked extensively with clients in Canada and the United States.

- Attentive to detail and clean code development
- Quick learner with a broad range of skills
- Team player

Experience

Full Stack Developer, SiteCraft   *Feb. 2018 – present*
SiteCraft is a consulting company that develops applications for customers around the world. For this company, I planned, developed and documented complex algorithms, custom APIs, blockchain-based payment solutions. Key projects:

- Architected and developed a **blockchain-based payment gateway** that incorporates Ethereum wallets, strong encryption and key management. Developed using Laravel, JQuery and various security components (EDS, hashing, etc.) on AWS.

- Developed a **REST API for a popular iOS and Android app** using Laravel and Algolia. The API incorporates complex timezone calculations and distance searching using coordinates and radii. Assembled a developer-friendly Postman collection and wrote documentation.

- Created a series of **Laravel modules for a medical device company** through which they track usage of their equipment and generate sales reports with a large amount of custom business logic. Worked as part of a team of five engineers using an agile/scrum methodology. Vue.js, PostgreSQL, MySQL.

Full-stack developer, NailsOfTheDay *Oct 2016 – Feb 2018*
Architected and developed an online championship website where tens of thousands of people post photos of their work, with daily winners being selected using complex algorithms that we constantly iterated on. Site contains a large number of photos, videos and auto-generated awards. Developed as an SPA using Laravel, Vue.js and S3. Deployed and configured servers for maximum performance.

Trainee WordPress developer, PineDev *Mar 2016 - Sep 2016*
Developed WordPress plugins for an outsourced development company. Implemented custom solutions using JQuery, Bootstrap and WooCommerce.
